protein-tyrosine-phosphatase (EC 3.1.3.48) type sigma precursor - rat
N.Alternate names: leukocyte common antigen-related phosphatase
C;Species: Rattus norvegicus (Norway rat)
C;Species: Rattus norvegicus (Norway rat)
C;Accession: S46217; S51174; Ā49104
R;Zhang, W.R.; Hashimoto, N.; Ahmad, F.; Ding, W.; Goldstein, B.J.
Biochem, J. 302, 39-47, 1994
A;Title: Molecular cloning and expression of a unique receptor-like protein-tyrosine-pho
A;Reference number: S46216; MUID:94347119; PMID:8068021
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A; Molecule type: mRNA

L. FUNCTION: MAY PLAY A ROLE IN THE INITIAL GROWTH AND GUIDANCE OF
AKONS. MAY BE INVOLVED IN CELL ADHESION.
L. SUBCELLULAR LOCATION: ATTACHED TO THE NEURONSL MEMBRANE BY A
GPI-ANCHOR AND IS ALSO RELEASED FROM NEURONS.
L. SIMILARITY: Contains 6 immunoglobulin-like C2-type domains.
L. SIMILARITY: Contains 4 fibronectin type III domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                REMOUED IN MATURE FORM (POTENTIAL).

Biol. Chem. 263:161379-16387(1988).

-!-FUNCTION: This protein is an integral component of basement membranes. It is responsible for the fixed negative electrostatic charge and is involved in the charge-selective ultrafiltration properties. It serves as an attachment substrate for cells.

-!-SUBGNAT: Purified perlecan has a strong tendency to aggregate in dimers or stellate structures. It interacts with other basement
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Moonan D.M., Fulle A., Valente P., Cai S., Horigan E., Sasaki M., Yanada Y., Hassell J.R., Valente P., Cai S., Horigan E., Sasaki M., Yamada Y., Hassell J.R., Perlecan, a basement membrane heparan "The complete sequence of perlecan, a basement membrane heparan cultate protecoglycan, reveals extensive similarity with laminin A chain, low density lipoprotein-receptor, and the neural cell adhesion

TISSUE SPECIFICITY: FOUND IN THE BASEMENT MEMBRANES.
PTM: CONTAINS THREE HEPRAN SULFATE CHAINS AS WELL AS N-LINKED AND O-LINKED OLIGOSACCHARIDES.
SIMILARITY: Contains 4 LDL-receptor class A domains.
SIMILARITY: Contains 11 laminin EGF-like domains.

PTM: A CLEAVKGE OCCURS THAT SEPARATES THE EXTRACELLULAR DOMAIN FROM THE TRANSMEMBRANE SEGMENT.
SIMILARITY: COntains 3 immunoglobulin-like C2-type domains.
SIMILARITY: Contains 8 fibronectin type III domains.
SIMILARITY: Contains 2 protein-tyrosine phosphatase domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     PROSITE; PS50835; IG_LIKE; 3.

Note=Expression developmentally regulated;
Note=Expression developmentally regulated;
TISSUE SPECIFICITY: Widely expressed.
DEVELOPMENTAL STAGE: EXPRESSED UBIQUITOUSLY THROUGHOUT THE MID TO LATE STAGES OF GESTATION AND IN ADULT TISSUES. STRONG EXPRESSION IS OBSERVED IN THE VENTRAL REGION OF THE VENTRICULAR ZONE OF THE EIS. 5 MOUSE NEURAL TUBE, AS IN THE VENTRICULAR ZONES OF THE MESENCEPHALON AND RHOMBENCEPHALON. ISOPORMS 3 AND 4 ARE EXPRESSED AT HIGHER LEVEL COMPARED TO OTHER ISOFORMS BETWEEN B11.5

THE CATALYTIC ACTIVITY OF TYROSINE KINASE. MAY BE CONNECTED TO THE PROGRESSION MARKER.

C. I. SUBCELLULAR LOCATION: Type I membrane protein.
C. ILSUB SPECIFICITY: HIGHLY EXPRESSED IN LUNG, LIVER, PANCREAS,
C. ILSUB SPECIFICITY: HIGHLY EXPRESSED IN LUNG, LIVER, PANCREAS,
C. GLAND, OVARY, BRAIN, HEART AND SKELETAM MUSCLE. ALSO EXPRESSED IN EXPRESSED IN COLON.
C. STMILARITY: BELONGS TO THE TYR PAMILY OF PROTEIN KINASES. INSULIN RECEPTION.
                                                                                                                                                                                                                                                                                                                                                                                Ullrich A.;

Wielmetter J., Roman J.M., Dreyer W.J.;

Weogenin, an avian cell surface protein expressed during terminal
neuronal differentiation, is closely related to the human tumor
neuronal differentiation, is closely related to the human tumor
and the coll siol. 127:2009-2020(1994).

J. Cell Biol. 127:2009-2020(1994).

I. FUNCTION: MAY BE INVOLVED AS A REGULATORY PROTEIN IN THE
TRANSITION OF UNDIFFERENTIATED PROLIFERATING CELLS TO THERR
DIFFERENTIATED STATE. MAY ALSO FUNCTION AS A CELL ADHESION
MOLECULE IN A BROAD SERCTRUM OF EMBRYONIC AND ADULT TISSUES.

C. I. SUBCELLULAR LOCATION: Type I membrane protein.

C. I. DEVELOPMENTAL STAGE: IN RETINA, EXPRESSED ON GANGLION CELL FIBERS
C. SUBFAMILY:

C. I. SIMILARITY: Contains 4 immunoglobulin-like C2-type domains.

C. I. SIMILARITY: Contains 6 fibronectin type III domains.

Event=Alternative initiation;
Comment=2 isoforms, A (shown here) and B, are produced by
alternative initiation at Met-1 and Met-85;
TISSUE SPECIFICITY: IN THE EMBRYO, EXPRESSED AT HIGH LEVELS IN THE
DEWELOPING BRAIN AND NEUMAL TUBE. IN ADULT, HIGHLY EXPRESSED IN
BRAIN WITH VERY LOW LEVELS FOUND IN TESTIS, HEART AND THYMUS.
ISOFORM CIS EXPRESSED ONLY IN THE EMBRYO.
DEWELOPMENTAL STAGE: LOW LEVELS IN EARLY GESTATION. HIGHEST LEVELS
EXPRESSED DURING MID GESTATION. LEVELS DECREASE IN LATE GESTATION
AND REMAIN AT THIS LEVEL IN THE ADULT.
SIMILARITY: BELONGS TO THE IMMUNOGLOBULIN SUPERFAMILY. DCC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Name=A;
IsoId=P70211-1; Sequence=Displayed;
Note=Isoform B is produced by alternative initiation at Met-85

-I- FUNCTION: IMPLICATED AS A TUMOR SUPPRESSOR GENE.
-I- SUBCELLULAR LOCATION: TYPE I membrane protein.
-I- SUBCELLULAR LOCATION: TYPE I membrane protein.
-I- TISSUE SPECIFICITY: FOUND IN AXONS OF THE CENTRAL AND PERIPHERAL NERVOUS SYSTEM AND IN DIFFERENTIATED CELL TYPES OF THE INTESTINE.
-I- DISEASE: COLORECTAL TUMORS THAT LOST THEIR CAPACITY TO DIFFERENTIATE INTO MUCUS PRODUCING CELLS UNIFORMLY LACK DCC EXPRESSION. INACTIVATION OF DCC DUE TO ALLELIC DELETION AND/OR POINT MUTATIONS MAY CAUSE BOTH LIMPHATIC AND HEMATOGENOUS METAATASIS OF OBSOPHAGEAL SQUAMOUS CELL CARCINOMAS.
-I- SIMILARITY: BELONGS TO THE IMMUNOGLOBULIN SUPERFAMILY. DCC
                                                                                                                                                              Bukaryoča, Metazoa, Chordata, Craniata, Vertebrata, Buteleostomi,
